Featured Speaker:

Jacqueline LaManna, PhD, APRN,
ANP-BC, BC-ADM, CDCES,
FADCES

Event Description:

Care transitions are times when hospitalized older adults are vulnerable to poor clinical outcomes such as medication errors, readmission, and even death. Well-executed care transitions incorporate effective communication and shared decision making between patients, care partners, and providers along with accurate medication reconciliation, planned follow-up, and education on reportable signs and symptoms of clinical changes.

In this presentation, we will discuss COVID 19's impact on the delivery of effective transitional care and troubleshoot potential solutions to address these care barriers.

Learning Objectives:

- Discuss components of effective facility to post-acute care and potential barriers imposed by COVID-19 protocols.
- Describe challenges faced by family caregivers during the COVID-19 pandemic and their impacts on delivering effective transitional care.
- Troubleshoot solutions to transitional care barriers associated with COVID-19.
