#### Event Description:

Delirium is a common and potentially preventable complication of illness or injury, especially for those individuals of advanced age and/or baseline cognitive impairment. Please join us for Part 3 of discussions related to delirium prevention, identification, treatment and management. Case examples across the health care continuum will be introduced to facilitate relatability. The session will be 30 minutes in length.

- Evidence based content on identifying medications that can cause delirium
- Suggestions on deprescribing of deliriogenic medications
- Alternatives to deliriogenic medications
- Use of medications to alleviate/mitigate symptoms of hyperactive behaviors

#### Objectives:

1. The learner will be able to identify medications with the potential to contribute to delirium in vulnerable populations.
2. The learner will be able to list safer alternative medications in high risk populations
3. The learner will learn strategies for deprescribing of high risk medications
4. The learner will list medications that might be helpful to alleviate severe hyperactive symptoms associated with delirium

**Use tomorrow:** Review facility formulary and utilization of high-risk medications

**Please invite your friends, colleagues, and loved ones to attend this event with you to learn together and support each other.**

Hosted by Alliant Health Solutions, a Quality Innovation Network – Quality Improvement Organization (QIN – QIO) under contract with the Centers for Medicare & Medicaid Services (CMS), an agency of the U.S. Department of Health and Human Services (HHS).
