Thursday, July 28, 2022

1 p.m. ET | 12 p.m. CT | 11 a.m. MT | 10 a.m. PT

Event Description:

Join us for part three of the Preventing Healthcare-Associated Infections (HAIs) Learning & Action Network Series. Over the last two years, progress toward eliminating HAIs has been impacted by the COVID-19 pandemic.

Multi-Drug Resistant Organisms (MDROs) remain a significant risk to patient safety. According to the Centers for Disease Control and Prevention (CDC), on any given day, about 1 in 31 hospital patients has an HAI.

This dynamic webinar will share strategies for getting “back to basics” when it comes to preventing MDROs, particularly hospital onset *C. difficile* and Methicillin-Resistant *Staphylococcus Aureus* (MRSA) bacteremia.

Additionally, we will discuss methods for integrating the patient voice into infection prevention.

Learning Objectives:

1. Identify and prioritize at least two key MDRO related infection prevention processes to hardwire and maintain in the event of another public health emergency or COVID-19 surge.
2. Establish or augment a plan to routinely track and report MDRO infections in your facility.
3. Develop a plan to routinely educate staff, patients and families on hospital infection prevention basics.
4. Identify ways to integrate the patient voice into infection prevention improvement plans.

Who Should Attend:

Nurses, Physicians, Infection Preventionists, Front-line Staff, Quality and Patient Safety Professionals, Clinical and Hospital Leaders, Patient and Family Engagement Advocates
