SEPSIS CARE IN 2022

Identification + Management Strategies to Optimize Patient Outcomes

Thursday, August 25, 2022

1 p.m. ET | 12 p.m. CT | 11 a.m. MT | 10 a.m. PT

OVERVIEW:

In the U.S., one person dies every two minutes from sepsis. The complexity of the disease, variability in presentation of the patient, and the skill and knowledge level of the provider makes this core measure distinctly different and potentially a greater challenge to implement. This webinar will focus on taking the learner through a four-tiered strategy to identify patients early in the disease and manage them based on the latest evidence. Health equity and disparities in sepsis care will also be discussed, as well as key implementation strategies for hard wiring the clinical and process behaviors. Barriers with reliable actions to reduce their impact will be described and participants will have the opportunity to identify gaps between the evidence and their hospitals program.

LEARNING OBJECTIVES:

1. Summarize the four-tier process for effective sepsis program development
2. Examine evidence for the sepsis bundles and share proven strategies to resolve barriers in implementation and measurement
3. Identify gaps between the evidence and your hospital's sepsis program

FEATURED SPEAKER

PAT POSA

RN, BSN, MSA, CCRN-K, FAAN

Quality and Patient Safety
Program Manager for UH/CVC
Michigan Medicine

TARGET AUDIENCE:

Sepsis Coordinators/Leads
Educators
Clinical Nurse Specialists
Acute Care Nurse Practitioners
Case Managers
Quality Managers
Directors
