Infection
Preventionist,
Campbell County
Health, WY

**Kristine N. Pinckney
RN, BSN, CIC**
Director of Infection
Control/Employee
Health,
Alaska Native Tribal
Health Consortium

Overview:

Data from the Centers for Disease Control and Prevention (CDC)'s National Healthcare Safety Network (NHSN) show a significantly higher incidence of catheter-associated urinary tract infections (CAUTIs) in 2021 compared to 2019. Since the COVID-19 pandemic, prevention of CAUTIs remains a patient safety priority in hospitals to reduce patient harm and costs and improve outcomes.

This presentation will feature real world examples of effective CAUTI prevention strategies shared by Alaska Native Medical Center and Campbell County Health infection prevention leaders. Our speakers will share their experiences developing staff education, optimizing surveillance, engaging physician champions and much more!

Learning Objectives:

1. Identify and prioritize at least one strategy for implementation to prevent catheter-associated urinary tract infections (CAUTIs)
2. Review appropriate indications for catheter insertion and develop a plan for educating your staff to reduce catheter utilization
3. Establish or augment your plan to routinely track and report CAUTIs in your facility

Target Audience:

Infection Preventionists, Nurses, Front-line Staff, Physicians, Quality Leaders and Patient Safety Leaders
