Enhancing Capacity - Reengineering Fall and Fall Injury Programs:

**INFRASTRUCTURE, CAPACITY AND
SUSTAINABILITY**

Tuesday, June 27, 2023
2 p.m. EST

OVERVIEW:

This webinar is designed to increase national and international awareness and importance of fall prevention, and, specifically to provide guidance and resources to clinical, administrative, quality and safety improvement professionals to add precision to the design, redesign and strategic plan.

Participants will learn how to improve program infrastructure, capacity and sustainability. They will also be challenged to reconsider aggregated fall rates as a measure of program effectiveness and inspired to clinically relevant measures of success. Every healthcare organization's healthcare team knows that fall and injury prevention programs are essential patient safety programs. However, many organizations struggle with structures and processes that remain dependent on universal fall precautions applied to all populations. For almost 10 years, national guidelines have shifted away from over reliance on universal fall precautions replaced by individualized, population-specific fall and injury prevention management.

LEARNING OBJECTIVES:

1. Integrate program evaluation and implementation science
2. Discuss essential elements and guidelines for fall and injury prevention programs
3. Examine expected fall and fall injury program attributes
4. Identify opportunities to enhance fall and fall with injury prevention program infrastructure, capacity and how to sustain improvements

**FEATURED
SPEAKER**

**PATRICIA A. QUIGLEY,
PhD, APRN, CRRN,
FAAN, FAANP, FARN**

Dr. Patricia Quigley, is a Nurse Consultant, Nurse Scientist, Former Associate Director and VISN 8 Patient Safety Center of Inquiry. She is both a Clinical Nurse Specialist and a Nurse Practitioner in Rehabilitation, and her contributions to patient safety, nursing and rehabilitation are evident at a national level – with emphasis on clinical practice innovations designed to promote elders' independence and safety. She is nationally known for her program of research in patient safety, particularly in fall prevention. The falls program research agenda continues to drive research efforts across health services and rehabilitation researchers.

Dr. Quigley's national fall prevention research program has impacted practice and policy for population-specific fall and injury prevention that as achieved national shifts in individualized care management and technology integration where falls and fallrelated injuries in hospitals are rare, ready for spread and adoption across healthcare.

TARGET AUDIENCE:

Fall and fall injury prevention program leaders, clinicians, educators, patient safety staff, quality improvement professionals, support teams, administrators, case managers and more.
